

# SUPERIORE

**Use and care manual  
for 24", 30" and 36" gas ranges**

# Congratulations

---

Congratulations and welcome to the SUPERIORE's world. We hope you will enjoy and appreciate the care and attention we put into every detail of your new, state-of-the-art range.

Your SUPERIORE range is designed to offer years of reliable service. This Use and Care Manual will provide the information you need to become familiar with your product's care and operation.

Your complete satisfaction is our ultimate goal. If you have any questions or comments about this product, please contact the dealer from whom you purchased it, contact our Customer Care Service or visit our SUPERIORE channel on Youtube.

We appreciate your choice of a SUPERIORE range and hope that you will choose again our products.

For more information about the complete and growing selection of SUPERIORE products, contact your dealer or visit us online at [SUPERIORE.US](http://SUPERIORE.US)

Antonio Di Tommaso  
CEO

# Warnings

**Getting Started Warning and Important Safety Instructions appearing in this manual are not meant to cover all possible conditions and situations that may occur. Common sense, caution, and care must be exercised when installing, maintaining or operating the appliance.**

**ALWAYS** contact the manufacturer about problems or conditions you do not understand.

## Recognize Safety Symbols, Words, Labels

**Hazards or unsafe practices which WILL result in severe personal injury or death**

**Hazards or unsafe practices which COULD result in death or severe personal injury**

**Hazards or unsafe practices which COULD result in minor personal injury.**

All safety messages will identify the hazard, tell you how to reduce the chance of injury, and tell you what can happen if the instructions are not followed.

**Read and follow all instructions before using this appliance** to prevent the potential risk of fire, electric shock, personal injury or damage to the appliance as a result of improper usage of the appliance. Use appliance only for its intended purpose as described in this manual.

**To ensure proper and safe operation:** Appliance must be properly installed and grounded by a qualified technician. **DO NOT** attempt to adjust, repair, service, or replace any part of your appliance unless it is specifically recommended in this manual. All other servicing should be referred to a qualified servicer. Have the installer show you the location of the gas shutoff valve and how to shut it off in an emergency. A certified technician is required for any adjustments or conversions to Natural or LP gas.

## KEEP THESE INSTRUCTIONS FOR FUTURE REFERENCE

**If the information in this manual is not followed exactly, a fire or explosion may result causing property damage, personal injury or death.**

## WHAT TO DO IF YOU SMELL GAS:

- **DO NOT** try to light any appliance.
- **DO NOT** touch any electrical switch.
- **DO NOT** use any phone in your building.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

**Installation and service must be performed by a qualified installer, service agency or the gas supplier.**

## TIPPING HAZARD

To reduce the risk of the appliance tipping, it must be secured by a properly installed anti-tip bracket(s). To make sure the bracket has been installed properly, look behind the range with a flashlight to verify proper installation engaged in the rear top left corner of the range.

- **THIS RANGE CAN TIP**
- **INJURIES TO PERSONS CAN RESULT**
- **INSTALL ANTI-TIP DEVICE PACKED WITH RANGE**
- **SEE INSTALLATION INSTRUCTIONS**

**DO NOT** use commercial oven cleaners inside the oven. Use of these cleaners can produce hazardous fumes or can damage the porcelain finishes.

To avoid risk of property damage, personal injury or death; follow information in this manual exactly to prevent a fire or explosion. **DO NOT** store or use gasoline or other flammable vapors and liquids in the vicinity of this or any appliance.

# Warnings

---

## To Prevent Fire or Smoke Damage

- Be sure all packing materials are removed from the appliance before operating it.
- Keep area around appliance clear and free from combustible materials, gasoline, and other flammable vapors and materials.
- If the appliance is installed near a window, proper precautions should be taken to prevent curtains from blowing over burners. **NEVER** leave any items on the top. The hot air from the vent may ignite flammable items and may increase pressure in closed containers which may cause them to burst.
- Many aerosol-type spray cans are **EXPLOSIVE** when exposed to heat and may be highly flammable. Avoid their use or storage near an appliance.
- Many plastics are vulnerable to heat. Keep plastics away from parts of the appliance that may become warm or hot. **DO NOT** leave plastic items on the rangetop as they may melt or soften if left too close to the vent or alighted surface burner.
- Combustible items (paper, plastic, etc.) may ignite and metallic items may become hot and cause burns. **DO NOT** pour spirits over hot foods. **DO NOT** leave oven unsupervised when drying herbs, breads, mushrooms, etc; fire hazard.

## In Case of Fire

Turn off appliance and ventilating hood to avoid spreading the flame. Extinguish flame then turn on hood to remove smoke and odor.

- **Worktop:** Smother fire or flame in a pan with a lid or cookie sheet.
- **NEVER** pick up or move a flaming pan.
- **Oven:** Smother fire or flame by closing the oven door. **DO NOT** use water on grease fires. Use baking soda, a dry chemical or foam-type extinguisher to smother fire or flame.
- Grease is flammable and should be handled carefully. **DO NOT** use water on grease fires. Flaming grease can be extinguished with baking soda or, if available, a multipurpose dry chemical or foam type extinguisher. Let fat cool before attempting to handle it. **DO NOT** allow grease to collect around the oven or in vents. Wipe up spillovers immediately.

## Child Safety

- **NEVER** leave children alone or unsupervised near the appliance when it is in use or is still hot.
- **NEVER** allow children to sit or stand on any part of the appliance as they could be injured or burned.
- **DO NOT** store items of interest to children over the unit. Children climbing to reach items could be seriously injured.
- Children must be taught that the appliance and utensils in it can be hot. Let hot utensils cool in a safe place, out of reach of small children. Children should be taught that an appliance is not a toy. Children should not be allowed to play with controls or other parts of the appliance.

## Cooking Safety

- To eliminate the hazard of reaching over hot surface burners,

cabinet storage should not be provided directly above a unit. If storage is provided, it should be limited to items which are used in frequently and which are safely stored in an area subjected to heat from an appliance. Temperatures may be unsafe for some items, such as volatile liquids, cleaners or aerosol sprays.

- **ALWAYS** place a pan on a surface burner before turning it on. Be sure you know which knob controls which surface burner. Make sure the correct burner is turned on and that the burner has ignited. When cooking is completed, turn burner off before removing pan to prevent exposure to burner flame.
- **ALWAYS** adjust surface burner flame so that it does not extend beyond the bottom edge of the pan. An excessive flame is hazardous, wastes energy and may damage the appliance, pan or cabinets above the appliance. This is based on safety considerations.
- **NEVER** leave a surface cooking operation unattended especially when using high heat setting or when deep fat frying. Boilovers cause smoking and greasy spillovers may ignite. Clean up greasy spills as soon as possible. **DO NOT** use high heat for extended cooking operations.
- **DO NOT** heat unopened food containers, build up of pressure may cause the container to explode and result in injury.
- Use dry, sturdy pot-holders. Damp pot-holders may cause burns from steam. Dishtowels or other substitutes should **NEVER** be used as potholders because they can trail across hot surface burners and ignite or get caught on appliance parts.
- **ALWAYS** let quantities of hot fat used for deep fat frying cool before attempting to move or handle.
- **DO NOT** let cooking grease or other flammable materials accumulate in or near the appliance, hood or vent fan. Clean hood frequently to prevent grease from accumulating on hood or filter. When flaming foods under the hood, turn the fan off.
- **NEVER** wear garments made of flammable material or loose fitting or long-sleeved apparel while cooking. Clothing may ignite or catch utensil handles. **DO NOT** drape towels or materials on oven door handles. These items could ignite and cause burns.
- **ALWAY** Splace oven racks in the desired positions while oven is cool. Slide oven rack out to add or remove food, using dry, sturdy pot-holders. **ALWAYS** avoid reaching into the oven to add or remove food. If a rack must be moved while hot, use a dry pot-holder.
- **ALWAYS** turn the oven off at the end of cooking.
- Use care when opening the oven door. Let hot air or steam escape before moving or replacing food.
- **NEVER** use aluminum foil to cover oven racks or oven bottom. This could result in risk of electric shock, fire, or damage to the appliance. Use foil only as directed in this guide.
- **PREPARED FOOD WARNING:** Follow food manufacturer's instructions. If a plastic frozen food container and/or its cover distorts, warps, or is other wise damaged during cooking, immediately discard the food and its container.

# Warnings

---

The food could be contaminated.

- If you are “flaming” liquor or other spirits under an exhaust, **TURN THE FAN OFF**. The draft could cause the flames to spread out of control.
- Once the unit has been installed as outlined in the Installation Instructions, it is important that the fresh air supply is not obstructed. The use of a gas cooking appliance results in the production of heat and moisture in the room in which it is installed. Ensure that the kitchen is well-ventilated. Keep natural venting holes open or install a mechanical ventilation device. Prolonged or intensive use of the appliance may call for additional (such as opening a window) or more effective ventilation (such as increasing the level of a mechanical ventilation if present).

## Utensil Safety

- Use pans with flat bottoms and handles that are easily grasped and stay cool. Avoid using unstable, warped, easily tipped or loose-handled pans. Also avoid using pans, especially small pans, with heavy handles as they could be unstable and easily tip. Pans that are heavy to move when filled with food may also be hazardous.
- Be sure utensil is large enough to properly contain food and avoid boilovers. Pan size is particularly important in deep fat frying. Be sure pan will accommodate the volume of food that is to be added as well as the bubble action of fat.
- To minimize burns, ignition of flammable materials and spillage due to unintentional contact with the utensil, **DO NOT** extend handles over adjacent surface burners. **ALWAYS** turn pan handles toward the side or back of the appliance, not out into the room where they are easily hit or reached by small children.
- **NEVER** let a pan boil dry as this could damage the utensil and the appliance.
- Follow the manufacturer’s directions when using oven cooking bags.
- Only certain types of glass, glass/ceramic, ceramic or glazed utensils are suitable for rangetop surface or oven usage without breaking due to the sudden change in temperature. Follow manufacturer’s instructions when using glass.
- This appliance has been tested for safe performance using conventional cookware. **DO NOT** use any devices or accessories that are not specifically recommended in this guide. **DO NOT** use eyelid covers for the surface units, stovetop grills, or add-on oven convection systems. The use of devices or accessories that are not expressly recommended in this manual can create serious safety hazards, result in performance problems, and reduce the life of the components of the appliance.
- The flame of the burner should be adjusted to just cover the bottom of the pan or pot. Excessive burner setting may cause scorching of adjacent counter-top surfaces, as well as the outside of the utensil. This is based on safety considerations.

## Heating Elements

- **NEVER** touch oven bake and broil burner areas or interior surfaces of oven.
- Bake and broil burners may be hot even though they are dark in color. Areas near burners and interior surfaces of an oven may become hot enough to cause burns.
- During and after use, **DO NOT** touch or let clothing or other flammable materials contact heating elements, areas near elements, or interior surfaces of oven until they have had sufficient time to cool. Other surfaces of the oven may become hot enough to cause burns, such as the oven vent opening, the surface near the vent opening, and the oven door window.

## Cleaning Safety

- Turn off all controls and wait for appliance parts to cool before touching or cleaning them. **DO NOT** touch the burner grates or surrounding areas until they have had sufficient time to cool.
- Clean appliance with caution. Use care to avoid steam burns if a wet sponge or cloth is used to wipe spills on a hot surface. Some cleaners can produce noxious fumes if applied to a hot surface.
- No commercial oven cleaner or oven liner protective coating such as aluminum foil should be used in or around any part of the oven. Improper oven liners may result in a risk of electric shock or fire. Keep oven free from grease buildup.

## WARNING

**NEVER** use appliance as a space heater to heat or warm a room to prevent potential hazard to the user and damage to the appliance. Also, **DO NOT** use the range top or oven as a storage area for food or cooking utensils.

## About Your Appliance

- **For proper oven performance and operation, DO NOT block or obstruct the oven vent duct located in the backguard/island trim.**
- Avoid touching oven vent area while oven is on and for several minutes after oven is turned off. When the oven is in use, the vent and surrounding area become hot enough to cause burns. After oven is turned off, **DO NOT** touch the oven vent or surrounding areas until they have had sufficient time to cool.
- Other potentially hot surfaces include rangetop, areas facing the rangetop, oven vent, surfaces near the vent opening, oven door, areas around the oven door and oven window.
- The misuse of oven doors (e.g. stepping, sitting, or leaning on them) can result in potential hazards and/or injuries.

## Power Failure

If power failure occurs, the electric igniters will not work. No attempt should be made to operate the appliance during a power failure. Make sure the oven control is in the “OFF” position.

Momentary power failure can occur unnoticed. The range is affected only when the power is interrupted. When it comes back on, the range will function properly without any adjustments. A

# Warnings

“brown-out” may or may not affect range operation, depending on how severe the power loss is.

## **WARNING**

### **ELECTRICAL SHOCK HAZARD**

**DO NOT** touch a hot oven light bulb with a damp cloth as the bulb could break. Should the bulb break, disconnect power to the appliance before removing bulb to avoid electrical shock.

## **WARNING**

**NEVER** cover any slots, holes or passages in the oven bottom or cover an entire rack with materials such as aluminum foil. Doing so blocks air flow through the oven and may cause carbon monoxide poisoning. Aluminum foil linings may also trap heat, causing a fire hazard.

## **WARNING**

### **ELECTRICAL SHOCK HAZARD**

Disconnect the electric power at the main fuse or circuit breaker before replacing bulb.

## **WARNING**

### **BURN OR ELECTRICAL SHOCK HAZARD**

Make sure all controls are OFF and oven is COOL before cleaning. Failure to do so can result in burns or electrical shock.

## **CAUTION**

To avoid sickness and food waste, **DO NOT** allow defrosted food to remain in the oven for more than two hours.

## **NOTICE**

**DO NOT** turn the Temperature Control on during defrosting. Turning the convection fan on will accelerate the natural defrosting of the food without the heat.

## **CAUTION**

### **BURN HAZARD**

The oven door, especially the glass, can get hot. **Danger of burning: DO NOT touch the glass!**

## **CAUTION**

You must carefully check the food during the dehydration process to ensure that it does not catch fire.

## **CAUTION**

**DO NOT** store items of interest to children over the unit. Children climbing to reach items could be seriously injured.

## **NOTICE**

The range is provided with an automatic cooling system, designed to start operating only when the range becomes hot during use, whether using the worktop or the oven or both simultaneously. The cooling system can also switch on and off more times during a single cooking cycle and continue operating for few minutes after the end of the same cooking cycle. In the event of air blowing out of the backguard/island trim holes, this is a normal operating function and does not require any action from the user.

# Before Using the Range

---

All products are wiped clean with solvents at the factory to remove any visible signs of dirt, oil, and grease which may have remained from the manufacturing process. Before starting to cook, clean the range thoroughly with hot, soapy water. There may be some burn off and odors on first use of the appliance this is normal.

## Oven

**Important! Before first use, wipe interior with soapy water and dry thoroughly. Then set the oven selector to bake, the thermostat to 450°F or 500 °F, and operate for an hour.**

### All models include:

- Five performance modes including convection baking providing air circulation for shorter cooking times with even results;
- Six rack positions and three wire shelves providing ample space for your baking needs;
- One telescopic glide shelf;
- Two lights illuminating the oven cavity;
- 30" cavity equipped with 2 convection fans and broiler;
- 36" cavity equipped with 4 convection fans and broiler;
- Continuous grating grids;
- Wok ring adaptor;
- Espresso trivet.

This appliance is certified by Star-K to meet strict regulations in conjunction with specific instructions found on [www.star-k.org](http://www.star-k.org)

# Surface Operation

## Surface Cooking Tips

Your range is equipped with a variety of different sized surface burners. Below is a guide for which burners work best for certain cooking applications:

Burner	Use
front left (left rear on 24") and front right 18,000 BTU	Quick water boiling Deep-fat frying in large utensil
right front simmer 750 BTU	Melting small quantities Steaming rice Simmering sauces
front central 3,600 BTU	Melting large quantities Low-temperature frying (eggs, etc.) Simmering large quantities Heating milk, cream sauces, gravies, and puddings
rear central and rear right 6,500 BTU	Sauteing and browning, braising, and pan frying Maintaining slow boil on large quantities
rear left (front left on 24") 11,000 BTU	High-temperature frying Pan broiling Maintaining fast boil on large quantities

**Note:** models with induction zones are provided only with the burners on the right.

Use low or medium flame heights when cooking in vessels that are poor conductors of heat, such as glass, ceramic, and cast-iron. Reduce the flame height until it covers approximately 1/3 of the cooking vessel diameter. This will ensure more even heating within the cooking vessel and reduce the likelihood of burning or scorching the food.

- Reduce the flame if it is extending beyond the bottom of the cooking vessel. A flame that extends along the sides of the vessel is potentially dangerous, heats the utensil handle and kitchen instead of the food, and wastes energy.
- Reduce the flame height to the minimum level necessary to perform the desired cooking process. Remember that food cooks just as quickly at a gentle boil as it does at a rolling boil. Maintaining a higher boil than is necessary wastes energy, cooks away moisture, and causes a loss in food flavor and nutrient level.
- The minimum pot or pan (vessel) diameter recommended is 6" (15 cm) on the larger burners. Pots or pans as small as 4" (10 cm) should be used on the smaller burners.

## Cooking Vessels

Each cook has his or her own preference for the particular cooking vessels that are most appropriate for the type of cooking being done. Any and all cooking vessels are suitable for use in the range and it is not necessary to replace your present domestic vessels with commercial cookware. This is a matter of personal choice. As with any cookware, yours should be in good condition and free from excessive dents on the bottom to provide maximum performance and convenience.

**Note:** When using big pots and/or high flames, it is recommended to use the front burners. There is more room in the front and potential cleanup at rear of appliance due to staining or discoloration will be minimized.

# Burners Operation

## Lighting Burners

All burners are ignited by electric ignition. There are no open-flame, “standing” pilots.

## Work-top Burners

To light the surface burners, push and turn the appropriate control knob anticlockwise to maximum flow position . This control is both a gas valve and an electric switch. When gas is permitted to flow to the burners, the electric igniters start sparking.

On all surface igniters you should hear a “clicking” sound. If you do not, turn off the control and check that the unit is plugged in and that the fuse or circuit breaker is not blown or tripped.

Within a few moments, enough gas will have traveled to the burner to light. When the burner lights, turn the burner control to any position from maximum  to minimum  flow position to adjust the flame size. Setting the proper flame height for the desired cooking process and selecting the correct cooking vessel will result in superior cooking performance, while also saving time and energy.

## Power burner with simmer

The range is provided with a power burner with simmer, a special burner featuring a very high flexible range of cooking settings: from 750 Btu/h for simmering, melting or steaming rice, to 18000 Btu/h for the most powerful performance.

To light the surface burners, push and turn the appropriate control knob anticlockwise to maximum power of inner ring. . The inner ring lights at its maximum power. Then you can continue to use only the inner ring and adjust the flame power by turning the control knob from  to  position. If you need to light on also the external ring, continue to turn anticlockwise the knob and make a little pressure on it in order to cross the lock located after the minimum power position of internal ring. The external burner lights on; flame is adjustable turning the knob from  to  position.

### Worktop burner knob + simmer

**OFF** = Closed position

 = “Full on” position internal ring

 = “Full on” position external ring

# Electric griddle

## Griddle/Simmer Plate (on applicable models)

The optional 1150W griddle is constructed of machined steel with a blanchard finish and is uniquely designed to offer excellent cooking performance as well as easy clean up.

The griddle is equipped with an electronic thermostat to maintain an even temperature across the griddle once the desired temperature has been set.

The griddle has a power “ON” indicator light which glows when the griddle thermostat has been turned on.

This will cycle on and off as needed to indicate the thermostat is maintaining the selected temperature. Before the griddle is used it is important to season the griddle. This seasoning process will change the appearance of the griddle plate.

However, it will also prevent food from sticking and protect the surface from moisture.

## Seasoning the Griddle Before the First Use

- Scrub the griddle plate with a mixture of one quart warm water and 1/4 cup white vinegar, using a blue Scotch-Brite™ pad. Dry thoroughly.
- Wash griddle with warm, soapy water. Rinse off and dry thoroughly.
- Season griddle by thinly coating the surface with approximately 1/2 to 1 teaspoon unsalted vegetable oil. Apply to entire griddle using a paper towel or clean cloth. Let oil sit on griddle for approximately 1 hour and then wipe with a clean cloth or paper towel to absorb any residual oil. The griddle is now ready to be used.

The griddle is equipped with a removable drip tray. After using the griddle, extract the drip tray, and dispose its content, paying attention to avoid spillages.

## Griddle/Simmer Plate Operation

- Turn the griddle control knob clockwise to the desired temperature setting. The power “ON” indicator light will glow indicating the griddle thermostat is on.
- Use liquid cooking oil or butter for eggs, pancakes, French toast, fish and sandwiches to prevent sticking.
- Routinely scrape loose food particles with a metal spatula during cooking to make the cleanup easier and to avoid the particles mixing with the food.
- To turn the griddle off, turn the thermostat knob clockwise to the “OFF” position.
- ALWAYS turn to the “OFF” position when not in use and lower the heat between cooking loads.

## Setting the desired temperature

The Griddle can be set at the desired temperature from 180-200°F to 550-580°F by rotating the control knob from 1 to 7 position.

The correspondence of temperatures is listed below.

Knob pos.	1	2	3	4	5	6	7
Temp.	180-200	280-300	330-350	380-400	430-450	480-500	550-580

## Electric griddle knob range 48”

**OFF** = Closed position

from 1 to 7 positions = Griddle temperatures

# Oven Functions and Setting

---

## **BAKE (Natural Airflow Bake)**

Use this setting for baking, roasting, and casseroles.

## **CONVECTION BAKE**

Use this setting to bake and roast foods at the same time with minimal taste transfer.

## **BROIL**

Use this setting for broiling dark meats at 1" thickness or less where rare or medium doneness is desired.

## **DEFROST**

Use this function to defrost foods.

## **LIGHT**

Use this function to see the interior of the cavity.

# Oven Features

---

## Rack Positions 24", 30" and 36" ranges

The oven has six rack positions and is equipped with three racks and one enamelled tray with trivet.

Position 1 is the farthest from the oven bottom. Position 6 is the closest to the oven bottom. The racks can be easily removed and arranged at various levels. For better results with conventional baking, **DO NOT** use more than one rack at a time. It is also recommended, when using two racks, to bake with the racks in positions 2 and 4 or positions 3 and 5.

# Using the Oven

---

## Oven Preheat

The oven temperature can reach a temperature of approx 400°F in 14 minutes in static function. Please consider this during the pre-heat process of the oven.

## Conventional vs Convection Cooking

Because of variations in food density, surface texture and consistency, some foods may be prepared more successfully using the conventional bake setting. For this reason, conventional baking is recommended when preparing baked goods such as custard. The user may find other foods that are also prepared more consistently in conventional bake. It is recommended to use this function for single-rack baking.

## Analog Thermometer (available on 24" 30" and 36" ranges only)

This is not an electrical device, so it even works if the range is not connected to the power outlet. This thermometer roughly shows the inner temperature of the main oven when this one is operated and it can have a deviation according to the type of cooking and the type of oven function. It isn't a control of inner temperature.

The control of the temperature is always done by thermostat, that is activated by the knob and that has on it the oven target temperatures.

Anyway, below, the approximate temperature of oven operation in relation of the thermometer areas:

WARM: between 70 °F and 200 °F :

MOD: between 200°F and 300 °F:

HOT: between 300 °F and 400 °F

VERY HOT between 400°F and 500 °F

# Baking

## BAKE

### (Natural Airflow Bake)

Full power heat is radiated from the bake burner in the bottom of the oven cavity and is circulated with natural airflow. This function is recommended for single rack baking. Many cook books contain recipes to be cooked in the conventional manner.

Conventional baking is suitable for dishes that require a high temperature. Use this setting for baking and casseroles.

### To Use BAKE Function

1. Arrange the oven rack in the desired position before turning the oven on and close the door.
2. Push and hold the oven control knob for at least one second. Release and turn it anticlockwise, setting the desired temperature. This sequence must be performed within seven seconds. If you hear a clicking sound while lighting up the oven, this is appropriate.

### Note:

If the oven does not light up after five attempts, open the oven door and let the gas out; for your safety, open the window of the kitchen.

## Baking Tips

- Make sure the oven racks are in the desired position before you turn on the oven.
- **DO NOT** open the door frequently during baking. Look through the door window to check doneness whenever possible. If you must open the door, the best time is during the last quarter of the baking time.
- Bake to the shortest time suggested and check for doneness before adding more time. For baked food, a stainless steel knife placed in the center of the product should come out clean when done.
- Use the pan size and type recommended by the recipe to ensure best results. Cakes, quick breads, muffins, and cookies should be baked in shiny, reflective pans for light, golden crusts. Avoid the use of old, darkened pans. Warped, dented, stainless steel and tin-coated pans heat unevenly and will not give uniform baking results.

Food	Pan size	Single rack position	Temperature	Time (min)
<b>ENTREES</b>				
Eggs rolls	Cookie sheet	3 or 4	400F°(204°C)	25-30
Fish sticks	Cookie sheet	3 or 4	425°F(218°C)	10-15
Lasagna, frz	Cookie sheet	3 or 4	375F°(191°C)	55-60

# Baking

## Solving Baking Problems

Baking problems can occur for many reasons. Check the chart below for the causes and remedies for the most common problems. It is important to remember that the temperature setting and cooking times you are accustomed to using with your previous oven may vary slightly from those required with this oven. If you find this to be true, it is necessary for you to adjust your recipes and cooking times accordingly.

### Common Baking Problems/Remedies

Problems	Cause	Remedy
Cakes burned on the sides or not done in center	<ol style="list-style-type: none"><li>1. Oven was too hot</li><li>2. Wrong pan size</li><li>3. Too many pans</li></ol>	<ol style="list-style-type: none"><li>1. Reduce temperature</li><li>2. Use recom. pan size</li><li>3. Reduce no. of pans</li></ol>
Cakes crack on top	<ol style="list-style-type: none"><li>1. Batter too thick</li><li>2. Oven too hot</li><li>3. Wrong pan size</li></ol>	<ol style="list-style-type: none"><li>1. Follow recipe Add liquid</li><li>2. Reduce temperature</li><li>3. Use recom. pan size</li></ol>
Cakes are not level	<ol style="list-style-type: none"><li>1. Batter uneven</li><li>2. Oven or rack not level</li><li>3. Pan was warped</li></ol>	<ol style="list-style-type: none"><li>1. Distribute batter even</li><li>2. Level oven or rack</li><li>3. Use proper pan</li></ol>
Food too brown on botton	<ol style="list-style-type: none"><li>1. Oven door opened too often</li><li>2. Dark pans being used</li><li>3. Incorrect rack position</li><li>4. Wrong bake setting</li><li>5. Pan too large</li></ol>	<ol style="list-style-type: none"><li>1. Use door window to bottom check food</li><li>2. Use shiny pans</li><li>3. Use recom. rack position</li><li>4. Adjust to conventional or convection setting as needed</li><li>5. Use proper pan</li></ol>
Food too brown on top	<ol style="list-style-type: none"><li>1. Rack position too high</li><li>2. Oven not preheated</li><li>3. Sides of pan too high</li></ol>	<ol style="list-style-type: none"><li>1. Use recom. rack position</li><li>2. Allow oven to preheat</li><li>3. Use proper pans</li></ol>
Cookies too flat	<ol style="list-style-type: none"><li>1. Hot cookie sheet</li></ol>	<ol style="list-style-type: none"><li>1. Allow sheet to cool between batches</li></ol>
Pies burned around edges	<ol style="list-style-type: none"><li>1. Oven too hot</li><li>2. Too many pans used</li><li>3. Oven not preheated</li></ol>	<ol style="list-style-type: none"><li>1. Reduce temperature</li><li>2. Reduce no. of pans</li><li>3. Allow oven to preheat</li></ol>
Pies too light on top	<ol style="list-style-type: none"><li>1. Oven not hot enough</li><li>2. Too many pans used</li><li>3. Oven not preheated</li></ol>	<ol style="list-style-type: none"><li>1. Increase temperature</li><li>2. Reduce no. of pans</li><li>3. Allow oven to preheat</li></ol>

# Convection Bake

## CONVECTION BAKE

Heat is radiated from the bake burner in the bottom of the oven cavity. The heated air is circulated by the fans in the rear of the oven providing a more even heat distribution. Multiple rack use is possible for the largest baking job. When roasting, cool air is quickly replaced searing meats on the outside and retaining more juices and natural flavor on the inside with less shrinkage. This even circulation of air equalizes the temperature throughout the oven cavity and eliminates the hot and cold spots found in conventional ovens.

### To Use CONVECTION BAKE Function (only on main oven)

1. Arrange the oven rack in the desired position before turning the oven on and close the door.
2. Push and hold the oven control knob for at least one second. Release and turn it anticlockwise, setting the desired temperature. This sequence must be performed within seven seconds. If you hear a clicking sound while lighting up the oven, this is appropriate.
3. Set the rotary switch knob to "Convection" 
4. In order to switch on the oven light during convection bake, set the rotary switch knob to "Oven light on+fan". 

#### Note:

If the oven does not light up after five attempts, open the oven door and let the gas out; for your safety, open the window of the kitchen.

## Convection Cooking Tips

Convection cooking is a cooking technique which utilizes fan-forced air to circulate throughout the entire oven cavity creating the optimum cooking environment. Cooking with convection is intended when performing multi-rack baking and for heavier foods. Below are some tips which will allow you to get the best results out of your oven when cooking with convection.

- As a general rule, to convert conventional recipes to convection recipes, reduce the temperature by 25°F (10°C) when using a convection cooking function.
- Cooking times for standard baking and convection baking will be the same. However, if using convection to cook a single item or smaller load, then it is possible to have 10-15% reduction in cooking time. (Remember convection cooking is designed for multi-rack baking or cooking large loads.)
- If cooking items which require longer than 45 minutes, then it is possible to see a 10-15% reduction in cooking time.
- A major benefit of convection cooking is the ability to prepare foods in quantity. The uniform air circulation makes this possible. Foods that can be prepared on two or three racks at the same time include: pizza, cakes, cookies, biscuits, muffins, rolls, and frozen convenience foods.
- For three-rack baking, use any combination of rack positions 2, 3, 4, and 5. For two-rack baking, use rack positions 2 and 4 or positions 3 and 5. Remember that the racks are numbered from bottom to top.

## Pan Placement Tips

- When using large (15" x 13") flat pans or trays that cover most of the rack, rack positions 2 or 3 produce the best results.
- When baking on more than one rack, it is recommended to use the 3rd and 5th position for more consistent even baking.
- Stagger pans in opposite directions when two racks and several pans are used in conventional bake. If possible, no pan should be directly above another.
- Allow 1 to 2 inches of air space around all sides of each pan for even air circulation.

# Defrost

---

Air is circulated by motorized fan in the rear of the oven. The fan accelerates natural defrosting of the food without heat. To avoid sickness and food waste, **DO NOT** allow defrosted food to remain in the oven for more than two hours.

1. Place the frozen food on a baking sheet.
2. Turn the selector to  and set the temperature to “OFF”.

To avoid sickness and food waste, **DO NOT** allow defrosted food to remain in the oven for more than two hours.

# Broiling

## BROIL

Heat radiates from the broiler located at the top of the oven cavity. The distance between the foods and the broil elements determines broiling speed. For “fast” broiling, food may be as close as 2 inches (5 cm) to the broil element. “Fast” broiling is best for meats where rare to medium doneness is desired. Use this setting for broiling small and average cuts of meat.

## Broiling Instructions

Broiling is a dry-heat cooking method using direct or radiant heat. It is used for small, individualized cuts such as steaks, chops, and patties. Broiling speed is determined by the distance between the food and the broil element.

Choose the rack position based on desired results.

## To Use Broil

1. Arrange the oven rack in the desired position before turning the oven on and close the door.
2. Push and hold the oven control knob for at least one second. Release and turn it clockwise to the broil position. This sequence must be performed within seven seconds. If you hear a clicking sound while lighting up the broil, this is appropriate.
3. In order to switch on the oven light during broiling function, set the rotary switch knob to “oven light on”.

**NOTE: IF YOU SELECT THE CONVECTION FUNCTION ACTIVATING THE ROTARY SWITCH KNOB, THE FANS WILL NOT WORK! THIS MUST BE CONSIDERED APPROPRIATE.**

## Broiling Tips

- **ALWAYS** use the enamelled tray and trivet for broiling. They are designed to provide drainage of excess liquid and fat away from the cooking surface to help prevent splatter, smoke, and fire.
- To keep meat from curling, slit fatty edge.
- Brush chicken and fish with butter several times as they broil to prevent drying out. To prevent sticking, lightly grease broiler tray.
- Broil on first side for slightly more than half the recommended time, season, and turn. Season second side just before removing.
- **ALWAYS** pull rack out to stop position before turning or removing food.
- Use tongs or a spatula to turn meats. **NEVER** pierce meat with a fork, as this allows the juices to escape.
- Remove the enamelled tray from the oven when you remove the food. Drippings will bake onto the pan if it is left in the heated oven after broiling.

## Rack Positions for Broiling

Note: Position 1 is the closest to the broiler and position 6 is the closest to the oven bottom.

- 1=95%
- 2=80%
- 3=65%
- 4=50%
- 5=35%
- 6=25%

# Broiling

**Broiling Chart**

Type and Cut of Meat	Weight	Setting	Rack	Time (min)
<b>BEEF</b>				
<b>Sirloin 1”</b>				
Rare	12 oz	Broil	3	4
Medium	12 oz	Broil	3	5
Well done	12 oz	Broil	3	6
<b>T-Bone 3/4”</b>				
Rare	10 oz	Broil	3	4
Medium	10 oz	Broil	3	6
Well done	10 oz	Broil	3	8
<b>Hamburger 1/2”</b>				
Medium	1/4 lb.	Broil	3	6
Well done	1/4 lb.	Broil	3	8
<b>CHICKEN</b>				
Bnls breast 1”	1/2 lb.	Broil	3	15
Bone-in breast	2-3 lbs. total	Broil	1	22
Chicken pieces	2-3 lbs. total	Broil	3	22
<b>HAM</b>				
Ham slice 1”	1 lb.	Broil	3	10
<b>PORK</b>				
Bacon		Broil	2	3
<b>FISH</b>				
Salmon steak	1 lb.	Broil	2	8
Filletts	1 lb.	Broil	2	8

**Note:** The above information is given as a guide only.

# Care and cleaning

---

## **Important!**

Before you start cleaning your range, please:

- Read these cleaning instructions and the 'Safety and warnings' section at the start of this user guide.
- Turn the range off.
- Make sure the range is a safe temperature to touch.
- Do not use a steam cleaner.
- Do not keep flammable substances in the oven.

## **General advice**

- Wipe down the worktop and wipe out the oven after every use.
- Wipe up spills. Avoid leaving alkaline or acidic substances (such as lemon juice or vinegar) on the surfaces.
- Do not use cleaning products with a chlorine or acidic base (ie citrus-based cleaners).

## **Cleaning the outside of the range**

### ***Important!***

- Do not use abrasive cleaners, cloths or pads on the outside surfaces.
- Immediately wipe off any caustic cleaners if they are spilled onto the oven door handle.

Wipe the outside surfaces often, using warm water and a mild household detergent. The stainless steel may also be cleaned with a suitable cleaner and polish.

Note: if you choose to use a commercial stainless steel cleaner, please read the label to make sure it does not contain chlorine compounds as these are corrosive and may damage the appearance of your range.

# Cleaning and Maintenance

Any piece of equipment works better and lasts longer when maintained properly and kept clean. Cooking equipment is no exception. Your range must be kept clean and maintained properly. Before cleaning, make sure all controls are in the "OFF" position. Disconnect power if you are going to clean thoroughly with water.

## Surface Burner

Wipe up spill-overs as soon as possible after they occur and before they get a chance to burn in and cook solid. In the event of a spill-over, follow these steps:

- Allow the burner and grate to cool to a safe temperature level.
- Lift off the burner grate. Wash in warm soapy water.
- Remove the burner cap and burner head and clean.

## Burner Caps

The surface burner caps should be routinely removed and cleaned.

**ALWAYS** clean the burner caps after a spill-over. Keeping the burner caps clean will prevent improper ignition and uneven flames. To clean, pull burner cap straight up from the burner base. Wipe off surface burner caps with warm, soapy water and a soft cloth after each use. Use a non-abrasive cleanser and a soft brush or soft Scotch Brite™ pad for cooked-on foods. Dry thoroughly after cleaning. For best cleaning and to avoid possible rusting, **DO NOT** clean in dishwasher.

## Burner Head

If ports on burner head are clogged, clean with a straight pin. **DO NOT** enlarge or distort the ports. **DO NOT** use a toothpick to clean the ports.

## Burner Base

The base should be wiped regularly with hot soapy water at the end of each cooling period. **DO NOT** use steel wool, abrasive cloths, cleanser, or powders. To remove encrusted materials, soak the area with a hot towel to loosen the material, then use a wooden nylon spatula. **DO NOT** use a metal knife, spatula, or any other metal tool to scrape the aluminum base.

- Wipe up any spills which remain on the sealed top surface.
- Replace burner cap, burner head, and grates after drying thoroughly.

## Control Panel

**DO NOT use any cleaners containing ammonia or abrasives.** They could remove the graphics from the control panel. Use hot, soapy water and a soft clean cloth.

## Oven Surfaces

Several different finishes have been used in your oven. **NEVER USE AMMONIA, STEEL WOOL PADS OR ABRASIVE CLOTHS, CLEANSERS, OVEN CLEANERS, OR ABRASIVE POWDERS. THEY CAN PERMANENTLY DAMAGE YOUR OVEN.**

# Cleaning and Maintenance

---

## Control Knobs

MAKE SURE ALL THE CONTROL KNOBS POINT TO THE OFF POSITION BEFORE REMOVING. Pull the knobs straight off. Wash in detergent and warm water. Dry completely and replace by pushing firmly onto stem. **DO NOT** use any cleaners containing ammonia or abrasives. They could remove the graphics from the knob.

## Stainless Steel Parts

All stainless steel body parts should be wiped regularly with hot soapy water at the end of each cooling period and with a liquid cleaner designed for that material when soapy water will not do the job. **DO NOT** use steel wool, abrasive cloths, cleansers, or powders. If necessary, scrape stainless steel to remove encrusted materials, soak the area with hot towels to loosen the material, then use a wooden or nylon spatula or scraper. **DO NOT** use a metal knife, spatula, or any other metal tool to scrape stainless steel. **DO NOT** permit citrus or tomato juice to remain on stainless steel surface, as citric acid will permanently discolor stainless steel. Wipe up any spills immediately.

## Glass Surfaces

Clean with detergent and warm water. Glass cleaner can be used to remove fingerprints. If using glass cleaner ammonia, make sure that it does not run down on exterior door surface.

## Oven Racks

Clean with detergent and hot water. Stubborn spots can be scoured with a soap-filled steel wool pad.

## BURN OR ELECTRICAL SHOCK HAZARD

Make sure all controls are OFF and oven is COOL before cleaning. Failure to do so can result in burns or electrical shock.

# Replacing Oven Light

## WARNING

### ELECTRICAL SHOCK HAZARD

Disconnect the electric power at the main fuse or circuit breaker before replacing bulb.

## WARNING

**DO NOT** touch bulb with bare hands. Clean off any signs of oil from the bulb and handle with a soft cloth.

**DO NOT touch bulb with bare hands. Clean off any signs of oil from the bulb and handle with a soft cloth.**

1. Unsnap glass light cover using a screwdriver in the access groove.
2. Firmly grasp light bulb and pull out.
3. Replace with halogen bulb using volt and wattage requirements listed on glass cover.
4. Replace the light cover by snapping glass cover onto metal box.
5. Reconnect power at the mainfuse or circuit breaker.

# Door Removal

---

## TO PREVENT PERSONAL INJURY

**Before removing the doors, make sure the pins are properly installed in the hinges. Failure to do so can result in personal injury to hands and/or fingers.**

The door can be completely disassembled to guarantee the general cleaning, of the glasses and the other parts. To disassemble the door you must observe the following procedure.

- Open the door and fix the pin as indicated in picture **1**.
- Put the hands on the internal glass surface, in the center, generate a small pressure and after slide back the glass, as indicated in picture **2**.
- Grasp the glass, rotate and remove as indicated in pictures **3** and **4**.

# Door Replacement and Adjustment

---

- Grasp the bars and remove as indicated in pictures **5** and **6**.
- Grasp the intermediate glass, rotate and remove as indicated in pictures **7** and **8**.

**Assamble again the door repeat all the operations but exactly one after the other in the reverse sequence. Before closing the door don't forget to remove the pins.**

# Thanksgiven dinner, SUPERIORE's way

---

## **DAY BEFORE (if possible): PUMPKIN filling & STUFFING**

### **PUMPKINPIE**

**Ingredients:** 1 very large pumpkin or 2 small to medium-sized pumpkins (to make 2 pies) min. 5 - 7 lb.

Slice portion off top of pumpkin and save the "lid". Remove the seeds and strings (all the pulp). Put entire pumpkin in a pan, with the lid back on top, then pour a cup or two cups of water in pan.

Bake at 350° (180-190°) for about 1 to 1½ hours, depends on the size of the pumpkin. Using a fork to check, cook until tender and falls apart. Remove from oven and either just pare -peel off skin- or cut pumpkin to scrape out the insides. This should give you enough pumpkin for several pies. Then follow the recipe. You can decide whether to make the pies the day before or not. Depends on time available and oven!

**Follow instructions for Pumpkin Pie recipe.**

### **BEGIN THE 1st PART FOR THE GIBLET STUFFING for TURKEY**

**Ingredients:** the innards from the turkey, 1 stalk celery, poultry seasoning or bouillon cube for poultry.

Simmer heart, liver, gizzard and neck in water <about 3 cups> with 1 stalk of celery and poultry seasoning or bouillon cube for poultry. Simmer until tender, check with a fork. About 1 hour. Cool and chop (mince or cube) into small pieces. Throw away celery. Keep liquid (broth) and meat in separate containers in refrigerator until ready to prepare and add to Turkey the next day. Turkey is prepared on the morning or mid-morning of Thanksgiving Day.

**Follow instructions for Turkey preparation.**

# Thanksgiving dinner, SUPERIORE's way

---

## **THANKSGIVING DAY:**

### **2<sup>nd</sup> PART GIBLET STUFFING:**

Ingredients: 1 box seasoned bread crumbs (12 cups croutons)  
1 onion diced  
2-3 celery stalks cut up  
1 teaspoon of pepper  
1 tablespoon of sage  
1 tablespoon thyme  
1 tablespoon poultry seasoning or bouillon cube for flavor  
broth from day before  
innards/meat from day before  
1 cup of butter  
additional chicken broth and/or water (where necessary)

Remove the broth and meat that you prepared the day before from the refrigerator. In a pan, put enough butter to lightly cook the onion almost sautéed, slight yellow color, stirring occasionally.

Then lower flame and stir in a portion of the bread crumbs, and a bit of broth, (note: stir to prevent excess browning), then add more bread crumbs and broth, add in cut up celery stalks, sage, pepper, thyme and meat.

Remove from heat and mix lightly in a deep bowl. Mixture should just be damp/slightly wet, pliable. Set aside until Turkey is ready to be stuffed.

### **ROASTING TURKEY**

Ingredients: 10 - 12lb. Turkey (order in advance from favorite butcher)  
a small amount of butter  
salt and pepper  
Giblet stuffing

Preheat oven to 325-350° (170-180°). Clean the turkey. Then place a small amount of butter inside by trying to coat the inside cavity. Then sprinkle cavity with a bit of salt and pepper. Stuff turkey in both cavities

..... main body and lower body area with the giblet stuffing, close with either oven hooks, pins or cord.

Place turkey in already preheated oven. Cook at 325-350° (170-180°) for 4 to 5 hours. When turkey starts to leave drippings, spoon or baste the liquid onto the turkey again, do this every 15-20 minutes until thoroughly cooked.

### **MASHED POTATOES**

Ingredients: 1-1½ potatoes per person (n. of guests X 1 or 1½)  
milk  
butter  
salt (and pepper if desired)

Boil potatoes until tender. Drain and cool then peel. Smash potatoes, add in milk a pat of butter and salt. Using blender, fork etc. until desired texture/consistency is obtained.

### **BROWN-SUGARED CARROTS**

Ingredients: 1½ carrots per person  
brown sugar  
butter

Boil carrots until slightly tender. Drain, then remove and dice into circles. In a sauté pan melt butter and add in diced carrots, sauté until more tender, add in brown sugar and if too dry add in a bit more butter and stir and sauté until brown sugar is melted and coats the carrots.

# Thanksgiving dinner, SUPERIORE's way

---

## PUMPKIN PIE (2 pies)

Ingredients: 1½ cups sugar  
¼ tsp. salt  
4 tsp. cinnamon  
1 tsp. ginger  
½ tsp. ground cloves  
4 eggs (or 1 egg and 6 egg whites)  
3½ cups pumpkin  
3 cups evaporated milk

Combine sugar, salt, cinnamon, ginger and cloves in medium bowl. Beat eggs slightly in large bowl. Stir and add in pumpkin and sugar and spice mixture from medium bowl. Mix well, then gradually add the evaporated milk. Pour in to pie crust shells and Bake at 425° (220°) for 15 minutes, then lower oven temperature to 350° (180°). Bake for another 40 to 50 minutes or until point that when you insert a knife or toothpick in the center of the pie, and pull it out it is clean. Cool on wire rack for 3 hours. Serve immediately or chill (do not freeze). Serve with whipped cream.

## APPLE PIE

Ingredients per pie: 7-8 apples (Granny Smith is best)  
1 cup sugar  
2 tbsp flour  
2 heaping tbsp. (3 cucc.) cinnamon  
100 gr butter

Thinly slice apples. Mix sugar, flour and cinnamon together in a large bowl. Add the apples to this and mix. Place mixture in pie shell and then put small pieces of butter on top of mixture. Place top crust over this, and join pieces, and cover edge with aluminum foil. Bake at 425° (220°) 25-30 minutes. Do not make slits in top crust! As an extra: you can baste the top of the pies with a small amount of heated butter and then sprinkle with sugar and cinnamon and place back in oven for the remaining time to finish baking. Serve hot with vanilla ice-cream!

## COUNTRY PAN GRAVY

Ingredients: drippings from turkey  
¼ cup flour  
½ cup milk  
salt and pepper  
1 bouillon cube for poultry

Remove Turkey from pan. Place pan on stove with low heat. Mix flour and milk with wire whip in deep bowl. Slowly add this mixture to the drippings in the pan. Mixture should become thicker. If too thick, then add more milk to pan gravy and crumble and add bouillon cube, salt and pepper to this. Serve over mashed potatoes and stuffing!

# Service Information

---

If service is required, call your dealer or authorized service agency.

The name of the authorized service agency can be obtained from the dealer or distributor in your area, on calling 1-844-322-2111.

Have the following information readily available.

- Model number
- Serial number
- Date purchased
- Name of dealer from whom purchased.
- Clearly describe the problem that you are having.

Record the information indicated below. You will need it if service is ever required.

The model and serial number can be found by looking in the last page of this booklet. A duplicate label is located on the back side of the range.

Model no. \_\_\_\_\_ Serial no. \_\_\_\_\_

Date of purchase \_\_\_\_\_ Date installed \_\_\_\_\_

Dealer's name \_\_\_\_\_

Address \_\_\_\_\_

\_\_\_\_\_

If service requires installation of parts, use only authorized parts to insure protection under warranty.

**Keep this manual for future reference.**

# Troubleshooting

---

Problem	Possible Cause and /or Remedy
Range will not work.	Range is not connected to electrical power: Have electrician check power circuit breaker, wiring, and fuses.
Oven light will not work.	Light bulb is burned out. Range is not connected to power.
Igniters will not work.	Circuit is tripped. Fuse is blown. Range is not connected to power.
Igniters sparking but no flame ignition.	Gas supply is interrupted.
Igniters sparking continuously after flame ignition.	Power supply is not grounded. Power supply polarity is reversed. Igniters are wet or dirty.
Burner ignites but flame is large, distorted, or yellow.	Burner ports are clogged. Unit is being operated on wrong type of gas. Air shutters not properly adjusted.
Strong odor and/or smoke is noticed first few times oven is used.	This is normal burn off of insulation and protective oils in oven. This will go away after using oven a few times.
Gas broiler goes off during initial operation	Cavity with too much carbon monoxide. Open oven door and let fresh air go in the cavity, then re-ignite the oven.
Bake element goes off during initial operation	Cavity with too much carbon monoxide. Open oven door and let fresh air go in the cavity, then re-ignite the oven.
